

ecoBETA in the UK

To whom it may concern

I am a consultant to the Water Companies in the UK having worked for a Water Company for 30 years. I work with Waterwise (the UK Water efficiency specialists) as well as Companies such as Thames Water, Anglian Water, Southern Water, Northumbrian Water, etc.

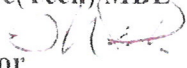

Many of the projects being carried out involve retrofitting water saving devices to customers properties. These projects involve hundreds of thousands of houses both from the private and Local Authority sectors. Devices are fitted to customers taps, toilets and showers which help make them water efficient

The most successful device we fit in the UK is the ecoBETA toilet retrofit which converts a single flush siphon valve to dual flush. This product is the most acceptable to customers and saves the most water

We have undertaken several housing association projects involving fitting water saving devices including the ecoBETA to social housing. These have been very successful and several Water Companies are now offering these products free to housing associations

I would thoroughly recommend ecoBETA products to you based on our experience in the UK
